

FAQ's

Is Vista ready to offer plug-in conversions now?

We are currently establishing the process and contractual details to begin initiating the charging station installations and PHEV conversions this Spring. We will have schedule and cost information for these retro-fits established and published within the next few months. We expect to have a number of cars and charging stations operable by the start of summer.

Which HEV's can you convert?

We anticipate being able to support PHEV retro-fits for the leading HEV manufacturers, including Toyota, Honda and Ford Escape HEV's. We are evaluating make/model years to determine the level of support that we can offer initially.

Which charging station mfr.s are you installing?

Vista is a solutions provider. We'll recommend the technology that best suits the application. We're not going to promote a specific technology or mfr. at the expense of the customer. We anticipate that the leading charging station mfr.s (i.e. Ecotality, Coulomb, Leviton, AeroVironment, et al) will be integrated with the majority likely to be Coulomb and Ecotality since they are already heavily invested in Washington and Oregon as a result of their I-5 installations.

How do I get more information when it comes available?

We are developing a web-site specific to this service offering that will ultimately serve as a primary communication tool for clients and interested parties. It should launch August 1st. Feel free to contact KC Kuykendall 396.1460 with specific questions in the mean time. As details of our service offering, including HEV's serviced, costs, options etc. we will make that available.
