Energy and Sustainability Solutions

VISTA ENGINEERING TECHNOLOGIES

Developing and deploying clean energy technology and sustainability solutions just got easier

Rising consumer demand for corporate environmental stewardship and the mounting pressure for clean energy and low-impact development have many companies searching for simple solutions to act, design and build green. Vista Engineering Technologies and Brightworks Sustainability Advisors have formed a strategic partnership to provide the experience and expertise necessary to plan and implement the transformation to next generation technology and management systems. This unique partnership offers a national network of experienced sustainability professionals and regionally based experts with a thorough understanding of priorities in the Columbia Basin.

About Brightworks Sustainability Advisors

Brightworks is a leading sustainability advisory service company committed to the success of our clients through a strategic application of sustainability. Brightworks manages LEED™ certification and sustainability programs for building projects - improving profitability, reducing risk, enhancing market position and helping protect the planet. We also help national labs, global enterprises, educational institutions, commercial developers and city, state and federal agencies integrate sustainability deeply into strategic and operational planning, using practical strategies to achieve visionary goals. Our approach combines change management, capacity building and sustainability program facilitation, training and implementation. Nearly all our work requires technical expertise and we have strategically partnered with Vista Engineering to provide a seamless delivery team.

About Vista Engineering's Sustainable Solutions Team

For more than a decade Vista Engineering Technologies has helped propel the Columbia Basin region to excellence through environmental and engineering services. With over a million man-hours in engineering and environmental science projects, numerous patents and technology developments in industries such as wind, solar, biomass and waste to energy technology development, Superfund site remediation and closure, and geophysical characterization, Vista Engineering represents a full-suite technology service company with core competency born from extensive experience across multiple disciplines. As part of the strategic alliance Vista will lead efforts to bring technical solutions to environmental and engineering challenges, while leveraging the extensive sustainability planning expertise that Brightworks has to offer for our clients.
